SUMMARY

Senior Software Engineer with 8+ years building production systems at scale across fintech, healthcare, and banking. Backend focus in Go and Node.js on AWS, with strong frontend and mobile delivery in React, React Native, and Flutter. I own products end-to-end for distributed teams across the US, UK, and EU.

- Strong fundamentals in distributed systems and microservices, focused on performance, reliability, and security, turning complex problems into production-ready systems that drive growth, efficiency, and real business value.
- Led the migration of high-throughput banking endpoints from Node.js to Go, introducing Go services into a platform serving 1.5M+ users (Tide).
- Raised bill-payment conversion 26% and lifted the App Store rating from 3.9 to 4.6 on a banking app with 5M+ downloads (BTG Pactual).
- Cut trade-execution time 25% on a stock-order feature used by 1M+ investors (Genial).

EXPERIENCE

Fullstack Engineer

Apr 2025 – Present

World Wide Technology → Wingstop · Remote, United States

QSR brand with 3,000+ restaurants worldwide and \$5.3B+ in system-wide sales, where 73%+ of orders are digital. Two customer-facing apps, an ordering app (Flutter) and a delivery app (React Native), backed by a Go services layer on AWS.

- Worked across the full stack of the consumer platform: the Flutter ordering app, the React Native delivery app, and the shared Go backend powering both.
- Designed and built Go microservices on AWS that consolidated ordering and delivery behind a unified API, removing duplicated business logic across the two apps.
- Optimized observability across the distributed Go backend by enhancing structured logging, traces, and metrics, cutting error-log volume 97.3% and Datadog monitoring cost 55%.
- Integrated LLM workflows into the production platform (Claude Code, MCP, agent-based pipelines) to automate engineering and operational tasks and accelerate delivery.

Fullstack Engineer

Aug 2023 – Apr 2025

Tide · Remote, United Kingdom

UK's leading SME business-banking platform: ~900K UK members (15% market share) and 1.5M+ globally, in a security- and compliance-critical environment.

- Built and owned Node.js backend services on AWS (Lambda, API Gateway, SQS), driving a modernization effort that introduced Go services and migrated high-throughput endpoints from Node.js to Go.
- Delivered features across backend microservices (Node.js on AWS), web frontend, and mobile in a banking-grade platform serving 1.5M+ users.
- Hardened security with code obfuscation, certificate pinning, and end-to-end data encryption across mobile and backend layers.
- Led WCAG accessibility compliance across mobile and web surfaces.

Fullstack Engineer

Jan 2022 – Jul 2023

BTG Pactual · Remote, United Kingdom

Largest investment bank in Latin America, \$190B+ in wealth under management; native banking app with 5M+ downloads plus a standalone offshore app.

- Built and integrated the Offshore Banking module on BTG Global (React Native), adopted by 50,000+ high-net-worth clients.
- Increased bill-payment conversion 26% via UX improvements, auto-approve flows, and smart defaults.
- Lifted the App Store rating from 3.9 to 4.6 by cutting the crash rate on the native-embedded Flutter module.
- Engineered white-label banking apps with app flavors and micro-frontends, cutting rollout from 3 months to 4 weeks and enabling 5 parallel apps from one codebase.
- Developed Node.js backend services on AWS and React.js web features; integrated Firebase and Sentry with CI/CD via GitHub Actions.

Fullstack Engineer

Oct 2020 – Dec 2021

Unimed · Remote

One of Brazil's largest healthcare cooperatives; medical app for the Rio Preto network.

- Scaled the Rio Preto medical app to 100,000+ active physicians.
- Introduced a modular micro-apps architecture across squads, accelerating new-feature rollout 40%.
- Led an architecture refactor that improved load time 35% (measured via Firebase Performance Monitoring).
- Built a reusable design system adopted by 3 product teams, cutting new-feature development time 40%.
- Developed Node.js backend APIs on AWS and hospital-system integrations.

Fullstack Engineer

Dec 2019 – Sep 2020

Likin.do · Remote

Social-impact marketplace connecting consumers with purpose-driven brands.

- Built core marketplace features (product listing, checkout, onboarding) that boosted buyer conversion 22%.
- Mentored the team on Clean Architecture; set up Firebase Analytics and crash reporting, cutting issue resolution from days to hours.
- Delivered React.js web features across the platform.

Fullstack Engineer

Mar 2019 – Nov 2019

Genial Investimentos · Remote

One of Brazil's largest independent investment platforms: 2M+ clients and \$50B+ in assets under custody, with mobile and web trading platforms.

- Built and optimized the stock-order feature used by 1M+ investors, cutting trade-execution time 25% (Node.js backend on AWS, latency monitoring via Datadog).
- Built white-label fintech applications, delivering branded trading and investment experiences from a shared codebase for partner institutions.

Software Engineer

Jun 2018 – Feb 2019

Hospital Israelita Albert Einstein · Remote

Consistently ranked among Latin America's top hospitals; JCI-accredited.

- Improved medical-app performance for 5,000+ physicians, reducing exam-report load time 40%.
- Launched an Exam Results PDF Download feature adopted by 90% of active users within the first month.

Web Developer

Sep 2017 – May 2018

L'Oréal · Remote

World's largest cosmetics company; in-store digital experiences.

- Built interactive in-store kiosks for 14+ luxury brands, increasing product engagement 60%.
- Developed a quiz-based recommendation engine generating 20,000+ product samples/month across Sephora stores.
- Reduced kiosk maintenance time 50% with reusable web modules.

EDUCATION

Information Technology — IFPB, Brazil

2019 – 2023

SKILLS

Backend: Go, Node.js, TypeScript, Python

Distributed Systems: Microservices, gRPC, GraphQL, REST API, Redis, LLM applications

Databases: PostgreSQL, MongoDB, DynamoDB, NoSQL

Cloud & Infra: AWS (EC2, S3, RDS, Lambda, API Gateway, SQS, SNS), Docker, CI/CD (GitHub Actions, Jenkins, Azure DevOps)

Architecture: Clean Architecture, DDD, TDD, BDD, Event-Driven

Observability & Testing: Datadog, Sentry, Grafana, Jest, PyTest, Mockito, Mocktail

Frontend & Mobile: React.js, Next.js, React Native, Flutter, Expo

AI: Claude Code, Cursor, MCP, LLM integrations, Agent-based workflows

Languages: Portuguese (Native), English (C1), Spanish (B2)
