## ABOUT

---

Software Engineer with over 7 years building scalable digital products across healthcare, finance, e-commerce, fitness, and education. I design and deliver high-performance applications focused on clean architecture, maintainability, and measurable business impact. Experienced working with distributed teams across India, US, UK, EU, and LATAM.

My background spans mobile, frontend, and backend engineering. I apply principles like Clean Architecture, DDD, and TDD to build resilient systems.

## SKILLS

---

- **Languages:** English (C1) - Portuguese (C2, Native) - Spanish (B2)
- **AI Tools:** Cursor AI, Claude Code, MCPs, used as personal productivity assistants to boost development speed and code quality.
- **Programming Languages/Frameworks:** Flutter, Dart, ReactJS, React Native, Expo, TypeScript, SwiftUI, Golang, Python, NodeJS
- **State Management:** Riverpod, Provider, BLoC/Cubit, GetX, MobX, Redux
- **Tests:** Unit, Widget, Integration, Golden Tests, Mockito, Mocktail, Jest, PyTest
- **Architecture:** Clean Architecture, BDD, DDD, TDD, MVVM, MVC
- **CI/CD:** Codemagic, Bitrise, GitHub Actions, Jenkins, Azure DevOps
- **Mobile Payments:** Stripe, RevenueCat, In-App Purchase, Shopify
- **Others:** GraphQL, FlutterFlow, Firebase, Supabase, Shorebird, AWS, Sentry, PostgreSQL

## EXPERIENCE

---

**Fullstack Engineer** Apr 2025 – Present  
[World Wide Technology → Wingstop](#) · Remote, United States

Wingstop is one of the fastest-growing QSR chains in the US with 2,000+ locations and a customer app with **5M+ downloads**. The digital ecosystem consists of two mobile applications: a customer-facing ordering app in Flutter and a delivery operations app in React Native, backed by services in Golang.

I introduced a modular “micro-apps” architecture that **enabled new feature rollout 40% faster** across squads. I **increased order conversion by 26%** through UX improvements and auto-approve flows. Stability work **cut the crash rate** and. I work across Flutter, React Native, and Golang, owning features end-to-end from API to UI. I also assisted with frontend development using React.js for internal web dashboards.

**Fullstack Engineer** Aug 2022 – Apr 2025  
[BTG Pactual Bank](#) · Remote, United Kingdom

BTG Pactual is the largest investment bank in Latin America, with a native banking app surpassing **5M+ downloads** on iOS and Android. I worked across two distinct mobile products: **BTG Global**, a standalone React Native app for offshore investments serving high-net-worth clients, and a **Flutter module embedded into the native Android/iOS app via Method Channels**, delivering new banking features within the existing platform.

On BTG Global, I built and integrated the Offshore Banking module, contributing to a product adopted by **+50,000 high-net-worth clients** (tracked through internal BI dashboards). I **increased bill payment conversion by 26%** through UX improvements, auto-approve flows, and smart defaults. On the native-embedded Flutter side, I improved app stability, **cutting the crash rate** and **lifting the App Store rating from 3.9 to 4.6**.

The stack spans React Native, Flutter with Method Channels, Clean Architecture, Node.js backend services, CI/CD with GitHub Actions, and integrations with Firebase and Sentry. I also contributed to frontend development using React.js for the web platform.

## Fullstack Engineer Jan 2022 – Jul 2022

[Unimed](#) · Remote

Unimed is one of Brazil's largest healthcare cooperatives. I worked on the "Unimed Rio Preto" medical app, scaling it to **+100,000 active doctors**. Beyond the mobile layer, I contributed to the Node.js backend for API development and hospital system integrations.

I led an architecture refactor that **improved load time by 35%**, measured via Firebase Performance Monitoring. I created a reusable design system adopted by 3 product teams, **cutting development time of new features by 40%**. I also **assisted with frontend development using React.js for the web portal**.

## Fullstack Developer Oct 2020 – Dec 2021

[Likin.do](#) · Remote

Likin.do is a social-impact marketplace connecting conscious consumers with purpose-driven brands. I worked across the Flutter mobile app and the React web platform, building core features including product listing, checkout, and onboarding that **boosted buyer conversions by 22%**.

I mentored the team on Clean Architecture and GetX, **reducing production bugs by 30%**. I implemented Firebase Analytics and crash reporting, cutting issue resolution time from days to hours. I handled frontend development using React.js on the web platform, building and maintaining core UI features.

## Fullstack Engineer Dec 2019 – Sep 2020

[Genial Investments Bank](#) · Remote

Genial Investimentos is a Brazilian digital investment bank. I worked across the mobile apps and the React web trading platform. I built and optimized the stock order ("boleto") feature used by **+1 million investors**, **reducing trade execution time by 25%** (measured via backend latency monitoring with Datadog).

I developed **white-label** banking apps for several brands, **accelerating rollout from 3 months to 4 weeks** through app flavors and micro-frontends. This enabled 5 parallel custom banking apps from a single codebase.

## Software Engineer Mar 2019 – Nov 2019

[Hospital Israelita Albert Einstein](#) · Remote

Albert Einstein is one of Latin America's most prestigious hospitals. I improved the medical app's performance for **+5,000 physicians**, **reducing exam report loading time by 40%**.

I launched an "Exam Results PDF Download" feature **adopted by 90% of active users within the first month**.

## Web Developer Jun 2018 – Feb 2019

[L'Oréal](#) · Remote

L'Oréal is the world's largest cosmetics company. I built interactive in-store kiosks for **14+ luxury brands**, **increasing customer product engagement by 60%**.

I developed a quiz-based recommendation system that generated **20,000+ product samples per month in Sephora stores** (internal CRM reports). I reduced kiosk maintenance time by 50% using reusable Web modules and Firebase analytics.

## Software Engineer Jan 2018 – May 2018

[Logon Computing](#) · Remote

I developed a health inspection app for city agents, replacing paper forms and **increasing field productivity by 50%**.

I implemented offline data sync with SQLite, enabling full functionality in low-connectivity areas. The digital submission workflow **reduced manual report processing from 3 days to a few hours**.

## EDUCATION
